

# **RecruitRadar: Follow-Up Scheduling App for Recruiters**

## ***Step 1: Business Problem Scenario***

**Productivity Pain Point:** Recruiters (especially those in specialized fields like actuarial science) frequently connect with high valued candidates months, or perhaps years, before they're ready to make a move. Traditional CRMs or spreadsheets lack the fine-grained, automated reminders needed to maintain long-term engagement efficiently. This results with the possibility of missed follow-up opportunities, cold leads that could've been nurtured, and wasted effort re-sourcing candidates already in the pipeline.

**Target App Users:** Independent recruiters or recruiting firms, specifically those focused on long-cycle industries such as actuarial, legal, or executive search. These users face:

- Manually tracking hundreds of candidate timelines
- Forgetting to follow up at the right time
- Lack of visibility into historical outreach efforts

**How *RecruitRadar* Could Add Value:** *RecruitRadar* is a simple, specialized productivity app that helps recruiters:

- Log candidate interactions
- Set custom follow-up dates
- Get notified when it's time to re-engage
- Track historical touchpoints

This lightweight CRM fills the gap between spreadsheets and bulky recruiting platforms.

**Possible API Extension:** Future integration with Google Calendar or email APIs to sync follow-ups, such as MailChimp or SendGrid.

### **Primary Goals:**

- Help recruiters manage candidate touchpoints over long periods of time
- Provide a clear daily/weekly list of who to follow up with
- Minimize lead drop-off by making follow-ups systematic

### Example User Stories:

| TITLE                                                | USER STORY                                                                           | ACCEPTANCE CRITERIA |                                                                                                     | PRIORI<br>TY | ESTIMATI<br>ON | NOTES                                                                          |
|------------------------------------------------------|--------------------------------------------------------------------------------------|---------------------|-----------------------------------------------------------------------------------------------------|--------------|----------------|--------------------------------------------------------------------------------|
| Add candidate w/<br>notes and<br>follow-up date      | <i>As a user, I want to add a candidate with notes and a follow-up date.</i>         | 1                   | A form is available to enter name, contact info, notes, and desired follow-up date.                 | HIGH         | 3 points       | This supports long-term candidate tracking and should include form validation. |
|                                                      |                                                                                      | 2                   | Upon submission, the candidate is saved in the database.                                            |              |                |                                                                                |
|                                                      |                                                                                      | 3                   | A follow-up entry is automatically created and scheduled.                                           |              |                |                                                                                |
|                                                      |                                                                                      | 4                   |                                                                                                     |              |                |                                                                                |
|                                                      |                                                                                      | 5                   |                                                                                                     |              |                |                                                                                |
| Notify user<br>follow-up date of<br>candidates       | <i>As a user, when a follow-up date is reached I want to be notified.</i>            | 1                   | Notification is triggered on follow-up date.                                                        | HIGH         | 3 points       | Users won't forget to re-engage w/ candidates.                                 |
|                                                      |                                                                                      | 2                   | Notification includes candidate details such as name, position applied for, and the follow-up note. |              |                |                                                                                |
|                                                      |                                                                                      | 3                   | The user receives the notification via in-app or email (if API integration is involved).            |              |                |                                                                                |

| View a timeline of interactions w/ candidates | As a user, I want to view a timeline of past interactions with a candidate. | 1 | Candidate profile includes a timeline or list of previous follow-ups. | MEDIUM | 2 points | Useful for prep before outreach. Display like a feed or vertical list. |
|                                               |                                                                             | 2 | Each entry shows date, status, and notes.                             |        |          |                                                                        |
|                                               |                                                                             | 3 | Timeline is read-only and sorted newest to oldest.                    |        |          |                                                                        |
|                                               |                                                                             | 4 |                                                                       |        |          |                                                                        |
|                                               |                                                                             | 5 |                                                                       |        |          |                                                                        |

## Step 2: Problem Solving Process

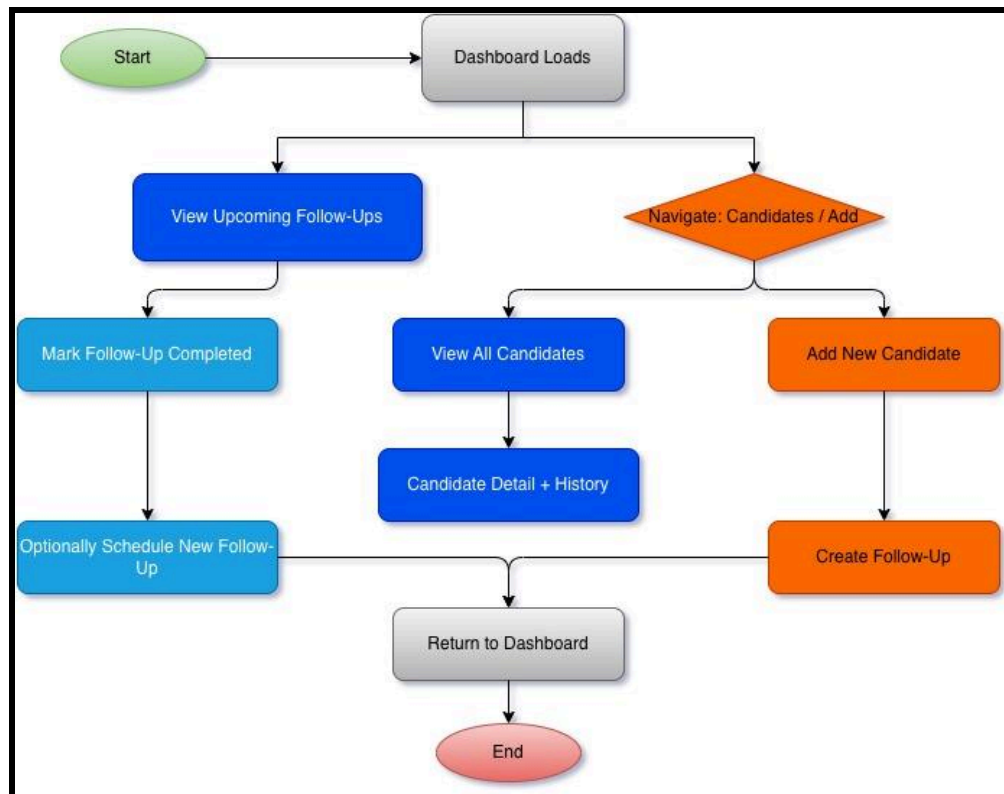

### Step-by-Step Build Plan:

1. **Backend Setup:** Set up Flask app, configure SQLAlchemy, define models, create seed data
2. **Frontend Setup:** Build React project, set up routes and components
3. **Core Features:** CRUD for candidates and follow-up reminders
4. **Testing & Error Handling:** Form validation, and empty state handling
5. **Polish:** Style UI, write documentation, and prepare for final versioning

### Conceptual Outline:

#### Core Features

- Add candidate profiles (name, contact info, role, company, notes)
- Schedule follow-up dates
- View daily/weekly follow-ups
- View interaction history
- Archival system when candidate is no longer in consideration

## Planned Data Models

- **Recruiter:** id, name, email
- **Candidate:** id, name, current\_title, company, email, phone, notes
- **FollowUp:** id, candidate\_id (foreign key), follow\_up\_date, status (pending/completed), notes, created\_at

Relationships:

- One recruiter → many candidates
- One candidate → many follow-ups

## React Component Breakdown

- App
  - Navbar
  - Dashboard (upcoming follow-ups)
  - CandidateList
    - CandidateCard
  - FollowUpForm
  - FollowUpHistory

## Tech Stack & Tools

- **Backend:** Python, Flask, JavaScript, SQLAlchemy
  - **Frontend:** React, React Router, React Hooks, useEffect/useState
  - **Database:** SQLite (local), or PostgreSQL (deployed)
  - **Styling:** CSS Modules or Tailwind
  - **Version Control:** Git/GitHub
- 

## Step 3: Timeline and Scope

### Project Timeline

| Phase                     | Time Estimate | Tasks Included                                      |
|---------------------------|---------------|-----------------------------------------------------|
| Backend Setup             | 2 pt          | Flask setup, models, migrations, RESTful routes     |
| Frontend Setup            | 2 pt          | React boilerplate, routes, layout, test fetch       |
| Core Features             | 3 pts         | CRUD for candidates and follow-ups, form validation |
| Dashboard & History Views | 2 pt          | List follow-ups, display history per candidate      |
| Polish & Present          | 1 pt          | Styling, README, presentation                       |

**Risks and Open Questions:** May need to figure out date filtering and time zone handling for follow-ups
